*.cmd & command-execution caveats

```
dell2900d:/user/students/me00/soft/exe04/cas1-16thanx>[73]cat sh.cmd
echo "#### . sh16 "
. sh16
echo "#### thanx Wang Liu "
thanx Wang Liu
dell2900d:/user/students/me00/soft/exe04/cas1-16thanx>[74] ./sh.cmd
#### . sh16
#### thanx Wang Liu
Thank Wang!
Thank Liu!
```

```
dell2900d:/user/students/me00>[229]echo $PATH
/apps/EDAs/synopsys/ns/bin:./user/students/m
```

Not Recommended

man tcsh

今函数thank和thanx生效的操作为:

\$. sh16

/bin/sh

Used to interpret shell scripts not starting with a '#'.

A new shell, i.e., /bin/sh, is spawned.
